NON-SEG REPAIRS & REFURBISHMENT

Providing exemplary turn-around times that often exceed our clients' emergency repair needs.

TIME IS MONEY WHEN AN OUTAGE OCCURS

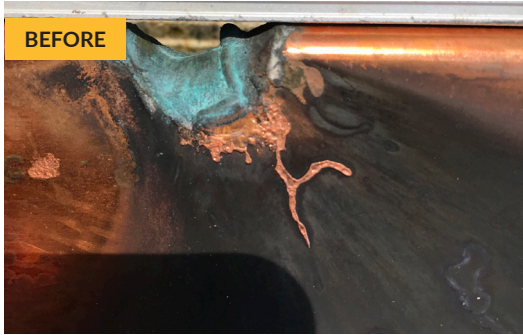

There are few industries in which the phrase “time is money” is more applicable than in the power generation industry. When outage time is critical, we bring over 50 years of experience to the project. Whether you have just experienced a non-segregated bus failure or you are looking to refurbish your non-seg bus bars during a planned outage, you need an experienced contractor to get you back online as quickly and safely as possible. EBI is the contractor of choice to retrofit or modify system critical electrical apparatus by OEMs, EPCs and power generators alike, because selecting an experienced and reputable contractor dictates when you can get back online. When systems fail that do not have a redundant backup, exact OEM replacement parts can be impossible to locate in a timely manner. EBI has a proven history of providing exemplary refurbishment or replacement turnaround times that meet and often exceed our clients' emergency repair needs.

Contact EBI for your upcoming project needs and experience the EBI difference!

COST EFFECTIVE SOLUTIONS

EBI understands the importance of extending the life of your existing electrical assets. We take a cost effective approach to needed repairs by reverse engineering solutions to conserve existing components, helping our clients get the most out of their system. EBI's network of certified manufacturing alliances allows us to shorten lead times and deliver unprecedented results.

WHAT OUR CLIENTS SAY

“Job was completed ahead of schedule. Crew worked well with plant staff. Prior to starting any task, the crew made sure they understood the plant safety protocol. EBI's strangest asset was the team's communication and flexibility.”

Electrical Engineer, Basin Electric Power Cooperative
